

THAMSANQA TIMOTHY NYEZI

Junior C# / .NET Developer

Belhar, Cape Town, South Africa | github.com/Timothynyezi | linkedin.com/in/tt-nyezi | [@timothynyezi](https://twitter.com/timothynyezi)

PROFESSIONAL PROFILE

Results-driven junior C# / .NET developer with formal NQF Level 6 training in Software Engineering from WeThinkCode_ and a specialisation in Data Engineering. Has practical experience in software design, development, testing, and database management gained through an accredited workplace experience programme. Actively building a C#/.NET portfolio within the Microsoft ecosystem, with a strong appetite for growth and a commitment to writing clean, maintainable code. Eager to contribute to and learn from an Agile development team.

TECHNICAL SKILLS

Primary Language: C# (.NET)

Other Languages: Java, Python, JavaScript

Web Technologies: HTML5, CSS3

Real-Time / Networking: SignalR

Databases: SQL (relational), NoSQL, Database Design

Data Engineering: ETL Pipelines, Apache Spark, Apache Kafka, Apache Airflow

Cloud & Storage: Amazon S3, HDFS, Docker

Version Control: Git, GitHub

IDE / Editor: Visual Studio Code with C# Dev Kit

Methodologies: Object-Oriented Programming (OOP), Systems Analysis and Design, Agile/Scrum

Operating Systems: Linux (Ubuntu), Windows

Currently Learning: ASP.NET Core Web API, SQL Server, Microsoft Azure

PRACTICAL EXPERIENCE

Software Engineering Trainee

WeThinkCode_ | Cape Town | 2024 – 2026

Completed a structured 16-month QCTO-accredited Software Engineering programme incorporating formal Workplace Experience components across software design, development, testing, and database management.

Software Design and Development

- Designed and documented software systems across all four semesters, producing system design artefacts and technical specifications
- Programmed and deployed applications from scratch, applying OOP principles, logical flow, and error handling throughout
- Worked with existing codebases (brownfield development) to understand, extend, and improve production-level code
- Built and deployed web applications, applying separation of concerns and database integration principles

Software Testing and Quality Assurance

- Tested and debugged source code to ensure client requirements were met across multiple project cycles
- Implemented acceptance testing and build pipelines, gaining exposure to CI/CD workflows

- Applied structured debugging techniques to identify and resolve defects in both new and existing code

Database Design and Management

- Designed and manipulated relational databases, applying normalisation principles and writing SQL queries
- Worked with both relational (SQL) and non-relational (NoSQL) database systems
- Integrated database layers into full application stacks, including web and data pipeline projects

Data Engineering Specialisation

- Built end-to-end ETL pipelines and managed distributed storage systems including HDFS and Amazon S3
- Developed batch and stream processing solutions using Apache Spark and Apache Kafka
- Orchestrated complex data workflows using Apache Airflow and containerised environments with Docker
- Completed a Data Engineering capstone project demonstrating end-to-end pipeline design and implementation

PERSONAL PROJECTS

Real-Time Docs Clone | [C#](#), [.NET](#), [SignalR](#)

A real-time collaborative document editor inspired by Google Docs, demonstrating back-end architecture with live bi-directional communication.

- Implemented a SignalR hub to broadcast document changes to connected clients in real time
- Designed a test client to validate hub functionality and message routing
- Demonstrates understanding of WebSocket-based communication patterns in .NET
- Planned enhancements: database persistence, conflict resolution, and a web front-end

Console Calculator with File Persistence | [C#](#), [.NET](#)

A console-based calculator that persists calculation history to a text file across sessions.

- Refactored into multi-file architecture applying separation of concerns (FileHelper.cs)
- Implemented robust input validation using double.TryParse to handle invalid entries gracefully
- Applied file I/O to save and reload calculation history between sessions

Math Game Console Application | [C#](#), [.NET](#)

An interactive console math quiz game built to solidify core C# fundamentals.

- Implemented multiple game modes using switch statements and List<T> for history tracking
- Used custom classes, Random, and Stopwatch for timed, randomised gameplay
- Completed all optional challenges including score tracking and result history display

In Progress: *CRUD REST API (ASP.NET Core + SQL Server) — to be added to portfolio shortly.*

EDUCATION

Occupational Certificate: Software Engineer — NQF Level 6

WeThinkCode_ | Cape Town Campus | Cohort 2024 | 16-Month Programme

QCTO Accredited (No. 07-QCTO/SDP281124132921) | 242/240 Credits Achieved | Final Outcome: Pass

- Notable scores: 100% in Python Consolidation (Sequences, Recursion and Algorithms), 100% in Java OOP (Encapsulation and Money Abstractions), 96.9% in Java Encapsulation and BigInteger Money Modelling

Data Engineering — Elective Specialisation

WeThinkCode_ | Officially Completed — January 2026 | 44/44 Credits | Competent

CORE STRENGTHS

- Problem Solving and Analytical Thinking
- Clean Code and Maintainability
- Self-Motivated and Continuous Learner
- Team Collaboration and Communication
- Debugging and Root-Cause Analysis
- Adaptability and Growth Mindset
